

RAMBOLL

DIGITAL SERVICES

DIGITAL COMMUNICATION & COMMUNICATION PLATFORM

Digital communication via communication platforms, also known as project webs, is an integrated form of collaboration across the construction industry, and Ramboll participates actively in this development.

Digital communication

Digital communication at Ramboll involves the use of a common digital communication platform such as a project web, for sharing and exchanging project documentation relevant to all project actors. Ramboll has broad experience with most project webs on the market, including:

- Ramboll ProjectWeb
- Docia
- IBinder
- Building project
- SharePoint
- Aconex
- 4 Projects.

Ramboll has undertaken all project web roles from collaborator to administrator on behalf of clients.

Ramboll ProjectWeb

Ramboll has developed its own platform called 'ProjectWeb'. Ramboll's ProjectWeb is extensively used for managing internal projects, but also by external clients. To ensure confidentiality and data security for all parties, the server is placed at KMD.

Relevant features of Ramboll's ProjectWeb:

- Complies with requirements according to the Danish ICT Decree 118 & 119
- Available to all users 24-7
- Multi-level rights management and user profiles
- Folder and file structure templates for Bips A104.
- Available on phone with free iOS app.
- Online viewer of documents (Office package)
- Direct link to Ramboll's Tender Portal
- Quick and easy support
- System notification about new files and versions.

Ramboll's ProjectWeb is one of the most reasonably priced on the market, and as an active tool in our construction projects, we are constantly developing it to ensure contemporary needs for construction projects.

Collaboration platforms of tomorrow

Ramboll believes that in the future, collaboration platforms will be more controlled by real-time data link from 3D models instead of manual file transfers. Some of the major BIM design software manufacturers have already taken this step with these products:

- Autodesk A360
- Autodesk Project Quantum
- Trimble Connect
- Bentley ProjectWise
- Think Project.
